

PREVENTATIVE MAINTENANCE PROGRAM:

INVESTING IN YOUR EQUIPMENT

Ask our customer service specialists how you can be put on an automatic 3-month, 6-month, or annual program. From our lab to yours.

Save yourself valuable time and money by routinely checking your equipment before it's too late. The technicians at Middlesex Gases & Technologies are experts on the wear and tear on welding equipment and are authorized to service most major brands. Our technicians will perform an on-site evaluation. Once we determine what is to be done, we will schedule a time to make all the necessary repairs and updates to your equipment. The process is simple for you and takes on average one hour per machine. After maintenance has been performed on all equipment, we will test the equipment to make sure everything is running smoothly.

Our Service Technician Will Check:

- Primary Transformer •
- Switches—Range—Polarity—AC/DC •
